

## Task3G

Installation & Quick Start Guide    Download Version

### Before Installing Task3G

#### You will need

- Functional Software login ID and password
- Licence keys
- An existing COSmanager installation
- root shell
- Approx 5Mbytes disk space

### Installing Task3G

#### Download Task3G

- Go to <http://downloads.fs.com.au/main.php?PROD=TSK>
- Select the desired operating system (OS) and version
- Right click **DOWNLOAD RAW** and save link to /tmp on your target host

#### Install Task3G

- ```
# cos -u cosmos
```
- From the COSmanager button bar, navigate '*Config > COSmanager configuration > Applications*'
  - Run '*Application > Install*'
  - Press  and choose Task3G from the pull-down list
  - If you did not receive a licence file with a Task3G licence key, you will be requested to enter a licence key
  - From the COSmanager button bar, '*Planet (File) > Exit All*'

## Configuring Task3G

```
# cos -u cosmos
```

- From the COSmanager button bar, navigate '*Config > Task3G configuration*'
- Run '*Maintain > Add*' to define a task Job
- Jobs can be defined as being:
  - *automatic* – recurring schedule with no user interaction
  - *scheduled* – recurring schedule requiring user interaction
  - *manual* – ad-hoc
- Run '*Maintain > Tasks in job*' to define tasks for your job
- Run '*Maintain > New task*' to define a task
- 

## Running a Task Job

- From the COSmanager button bar, click the '*Task*' button
- Select the task Job, and run '*Submit > Run now*'
